DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claims 2, 6, 8 and 9 have been considered but are moot in view of the new ground(s) of rejection.

Claim Objections

2. Claim 8 is objected as being in improper form because independent claim 1 has been cancelled.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 2 and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over (Admitted Prior Art Figure 9) in combination with Faye et al. (US 6,6501,169).

Fig 9 discloses switching section (103-106); transformer (107); synchronous rectifier section (108, 109); smoothing section (110, 111); PWM circuit (114); drive transformer (121); auxiliary power supply (115); first and second drive switches (116, 117 or 118, 119); primary capacitor (120).

However APA fig. 9 does not disclose controlling the first drive switch and the second drive switch to have an OFF period in which the first drive switch and the second drive switch are simultaneously OFF according to the PWM signal.

Faye et al. teach a gate driver circuit wherein the transistors (Q1, Q2) include a dead time wherein both transistors are simultaneously off in order to avoid shoot through.

Therefore, it would have been obvious to one having ordinary skill in the art at the time of the invention to modify APA fig. 9 to include dead time between turn on and turn off of the transistors in the driver circuit in order to avoid shoot through as taught by Faye et al.

Allowable Subject Matter

5. Claims 6 and 9 are allowed.

6. The following is a statement of reasons for the indication of allowable subject matter: prior art fails to disclose or suggest, inter alia, a switching power supply having the first winding of the drive transformer connected to the switching sections.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. US 6,452,818 Simopoulos discloses a self driving active clamp in a synchronous rectifier; US 6,111,769 Zhang et al. disclose a driving circuit for bridge type synchronous rectification; US 5,289,359 Ziermann disclose a dc-dc power converter.

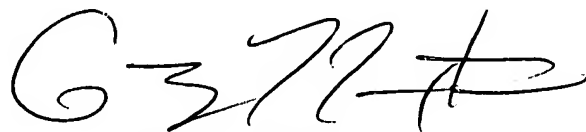

8. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
